More Project Nitro Details

A leaked document confirms many of the upcoming portable's features.

On the day that Nintendo unofficially changed the project name of its Nintendo DS dual screen system to Project Nitro, a leaked document has been making the rounds. This document is assumed to be from the Japanese development docs, and reveals many of the features of the upcoming handheld. We have confirmed with North American development sources that the features listed in the document are entirely legitimate.

The document confirms that the system will have an ARM 7 and an ARM 9 processor, the ARM 7 running at 33 mhz (the GBA's ARM 7 runs at 16.8 mhz) and the ARM 9 running at 67 mhz. The unit will feature four megabytes of system RAM, as well as 32K of processor RAM for both ARM 7 and ARM 9, and 656K of VRAM. Development sources have informed us that along with aiding in Project Nitro-native games, the ARM 7 will also be Boy Advance compatibility.
